

The Pilot's iPad: A Scenario-Based Walkthrough

The iPad will be demonstrated on two simulated flights: a VFR flight in a Cessna 172 and an IFR flight in a King Air. Watch in real-time and explore the capabilities and limitations of the iPad when applied to flight operations. Decide for yourself if the iPad is an investment in flight safety, or simply another distraction in the cockpit. Applications used in the presentation will include Aviation Weight & Balance, Sporty's E6B, Foreflight, Jepp FD, and LogTen Pro. Pilots who own iPads and one or more of the listed applications can take advantage of the on-site WiFi and follow along with the presenter.

Directions: From Highway 58, South on Union Ave. Left turn on Wilson Rd. Building is located across parking lot from the Rocket Shop Cafe.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area
